Subject: Tebuconazole – Generic ID# GDCI-128997-1598

1-year Progress Report for DCI Studies

Dear Mr. Williams:

On December 23, 2017, we submitted our 90-day response to the Tebuconazole Reregistration Eligibility Decision for Generic Data Call-In (received on September 14, 2017). In our 90 day response we responded with Option 1(developing data) for several guideline requirements. Among the studies for which data is being generated, the following are due within 24 months of the issuance of the DCI:

Guideline Number	Study Title	Study Due Date
SS-1196	Whole Sediment: saltwater invertebrates	9/14/2019
SS1197	Whole Sediment: freshwater invertebrates	9/14/2019

This letter is to provide a 1-year progress report for the above studies. The sediment studies have been contracted and the analytical method and sediment equilibration trials are underway. Both studies are on track and expected to be completed on time to meet the due date of September 14, 2019.

A separate letter providing an update on additional study requirements and requesting a due date extension was submitted to the Agency on July 30, 2018. After review of Bayer's request, an extension was granted; below is a summary of the revised due dates for several studies:

Guideline	Test	Original date for	New Due Date
		Submission	
850.4500	Algal Toxicity	14-Sep-2018	14-April-2019
850.4550	Cyanobacteria (Anabaena flos- aquae) Toxicity	14-Sep-2018	14-April-2019
850.2200 (in lieu of 850.2100)	Avian dietary toxicity test (in lieu of Avian acute oral toxicity test)	14-Sep-2018	14-April-2019

In addition, we are in the process of arranging a conference call with the Agency to discuss the feasibility of conducting an avian dietary study in lieu of the avian acute tox study.

If you have any questions or need additional information, please contact me by phone at (919) 549-2631 or by e-mail at jessica.fernandez@bayer.com.

Sincerely,

Jessica Fernandez
